

NOW AVAILABLE

The **ONLY COMPREHENSIVE GUIDE** to using the **DYNAVISION 2000** in **REHABILITATION**

DYNAVISION FOR REHABILITATION OF VISUAL AND MOTOR DEFICITS: A USER'S GUIDE

Written by leading experts in the use of the Dynavision for rehabilitation of visual and motor deficits

PETER KLAVORA Ph.D.

University of Toronto

and

MARY WARREN MS, OTR/L, SCLV, FAOTA

University of Alabama at Birmingham

Included in the Guide is:

- a comprehensive description of the instrument's functions and treatment options
- indepth information on treatment of visual impairments including:
 - hemianopsia
 - oculomotor dysfunction
 - monocular vision loss
 - visual inattention
- indepth information on treatment of motor impairments involving the upper extremities and postural control including:
 - restricted active range of motion
 - decreased muscle strength
 - decreased endurance
 - motor planning deficits
 - reduced bilateral integration
 - impairments in standing and sitting balance
- treatment techniques addressing the full range of performance levels from low to high functioning clients
- suggestions of activities to supplement Dynavision training for specific deficits
- application of the Dynavision in driver's training for clients following stroke and traumatic brain injury
- use of the Dynavision with children
- how to incorporate Dynavision training into treatment planning and goal setting; objective of daily and weekly progress

The Guide has been carefully designed to provide the user with all of the information and tools needed to use the Dynavision effectively in treatment through:

- extensive use of pictures and diagrams to illustrate board functions and treatment techniques
- clear explanations of how to position the client and correct button striking technique
- specific treatment protocols for each impairment presented in easy to read chart form
- reproducible charts for documenting client progress
- sample case studies to illustrate treatment progression
- reprints of published studies on use of the Dynavision in rehabilitation along with an extensive bibliography
- trouble shooting tips

THIS IS THE ONLY GUIDE YOU WILL EVER NEED TO USE WITH THE DYNAVISION IN REHABILITATION OF YOUR CLIENT WITH VISUAL OR MOTOR IMPAIRMENT.
